

Computer Engineering Master's student specializing in **Systems, Signals and Control**, with a strong passion for **Control Systems** and **Signal Processing**. Having completed advanced courses combined with labs and projects, I hold deep theoretical knowledge about design and analysis of systems, as well as the ability to find solutions for real world processes.

EDUCATION

<i>Computer Science and Engineering</i>	Lund University	3.54 GPA	2022 - present
<i>Introduction to Law</i>	Lund University		Summer 2023
<i>Technology Program</i>	Kattegattgymnasiet		2019 – 2022

SKILLS

Math: Calculus, Linear Algebra, Statistics, Complex Analysis.

Programming: Python, Java, Go, C, MATLAB, Verilog.

Technologies: Git, SQL, Linux, L^AT_EX.

Languages: Swedish (Native), English (Fluent), Spanish (Basic).

ACADEMIC AND PERSONAL PROJECTS (PORTFOLIO)

Ball and Beam Regulator

Designed cascade **PID controllers** and a **state machine** utilizing **Java Concurrency** to regulate ball position via motor voltage and guide it into a basket.

Real-time Audio Processing

Developed a modular framework for chaining live audio effects by implementing low-latency **Signal Processing** blocks in **C** for **Real-time** execution.

AI Snake

Trained a model to autonomously navigate and play Snake by building a custom **Reinforcement Learning** in **TypeScript**.

WORK EXPERIENCE

Software Engineer, *Axis Communications* Summer 2026

Tasks: Develop firmware code and functional tests to ensure quality of product.

Takeaways: Learned about the challenges and strategies around collaborating on large codebases.

Designer and Developer, *Trema Fastighets AB* Summer 2024

Tasks: Complete rewrite of website frontend and integrating with backend.

Takeaways: Learned strategies for performing **maintenance** on existing software.

Private tutor, *Allakando* 2023

Tasks: Worked with high school students to improve their grades.

Takeaways: Improved my **communication skills** and learned how to better motivate others.
